

# Dashboard

## Problems to Solve:

- We Need an entry point for the console
- At some point we have to show users what apps they have

## Adds up to an App List

But...

This is a big hammer for a little nail  
And it's BORING!

**What's better? a Dashboard!**

# Dashboard

## **We have some Opportunities**

- To have the user's attention
- To provide something useful for the user

## **Useful for us?**

Communication

- New features
- New releases
- Outage notifications

## **Useful for them?**

Know that nothing is wrong

- Critical messages
- Status overview
- Things they specifically care about

# Dashboard

## **How will users consume this page?**

- Mostly ignore on the way to doing something else
- Quick monitoring

## **How to facilitate consumption patterns?**

- Really important stuff up front and hard to ignore
- Don't get in the way unless it's important
- Easy for users to get on with what they want to do
- Guidance available for new users
- Mobile friendly
