# Scaling

Estimated cost to run AppName:

\$**27** to \$**120**

[about billing >](#)

## Gears

Gears are units of resources available to your app. A gear is roughly XMB of memory and X amt of Processing time. A gear costs \$X a month, and is charged by the hour. You can set a range of gears your app should use, and we'll scale your app in that range. [Read more about gears and scaling in the dev center >](#)

### Gear Summary

#### Avg Usage

this month **6.7**

last month **3.5**

app lifetime **3.1**

#### Minimum gears

php 1 small

mysql 1 med

load balancer 1 small

**Total** 2 small

1 med

AppName php-5.3

uses SMALL gears ▼

## You can make this cartridge scalable

A shared database prevents web apps from scaling. Upgrade your shared database to a stand-alone database, and scaling will become available.
